

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Yet it is hoped that no essential principle of elementary trigonometry has been omitted, and that this subject has been treated with a completeness sufficient for the needs both of the engineer and the student of the more advanced branches of mathematics, such as analytical geometry and the calculus."

Contents: Chapter I, Algebra: Factoring; radicals, fractional and negative exponents; imaginary quantities; quadratic equations; applied problems in quadratic equations; some problems in gunnery; review, 1-43. II, Graphic methods: Coördinates and simple graphs; related graphs; straight line graphs; simultaneous straight line graphs; curve plotting; maxima and minima; areas; the straight line and circle; graphic solution of equations; review, 44-109. III, Trigonometric functions: The general angle and its measures; the trigonometric or circular functions; reductions to the first quadrant; functions of an acute angle; trigonometric graphs; solution of right triangles; arithmetic solution of oblique triangles; functions of the sum and difference of two angles; inverse trigonometric functions and trigonometric equations; review, 110-178. IV, Logarithms and their use: Exponents and logarithms; logarithmic computation; application of logarithms to mensuration of plane figures; logarithmic and exponential curves, 179-203. V, Logarithmic solution of triangles: Oblique triangles, cases I, II, III, IV; miscellaneous problems involving triangles; review, 204-232. Index, 233-236.

The Mystery of Space. A Study of the Hyperspace Movement in the Light of the Evolution of New Psychic Faculties and An Inquiry into the Genesis and Essential Nature of Space. By R. T. BROWNE. New York, Dutton, 1919. 8vo. 18 + 395 pp. Price \$4.00.

Preface, first paragraph: "Mathematics is the biometer of intellectual evolution. Hence, the determination of the *status quo* of the intellect at any time can be accomplished most satisfactorily by applying to it the rigorous measure of the mathematical method. The intellect has but one true divining rod and that is mathematics. By day and by night it points the way unerringly, so long as it leads through materiality; but, falteringly, blindly, fatally, when that way veers into the territory of vitality and spirituality."

Contents: Introduction, explanatory notes, 1-22; Chapter I, The prologue, 23-43; II, Historical sketch of the hyperspace movement, 44-68; III, Essentials of the non-euclidean geometry, 69-91; IV, Dimensionality, 92-117; V, The fourth dimension, 118-160; VI, Consciousness the norm of space determinations, 161-202; VII, The genesis and nature of space, 203-241; VIII The mystery of space, 242-283; IX, Metageometrical near-truths, 284-326; X, Media of new perceptive faculties, 327-358; Bibliography, 359-366; Index, 367-395.

NOTES.

In *General Mathematics*, [for first year in a high school] (Boston, Ginn, 1919. 12mo. 16 + 488 pp. \$1.48), by R. SCHORLING and W. D. REEVE, members of the Association, "the material purposes to present such simple and significant principles of algebra, geometry, trigonometry, practical drawing, and statistics, along with a few elementary notions of other mathematical subjects, the whole involving numerous and rigorous applications of arithmetic as the average man (more accurately the modal man) is likely to remember and to use."

Macmillan, London, has published volume III of Sir Thomas Muir's *The Theory of Determinants in the Historical Order of Development*, covering the period 1861-1880.

Giornale di Matematica Finanziaria is the title of a quarterly started in 1919 under the direction of Doctors F. Insolera and S. Ortu-Carboni (Publisher, 73 Corso Vittorio Emmanuele, Turin, Italy; price 16 lire a year). The editors plan that the periodical shall contain not only purely scientific studies with special reference to mathematics of finance (credit, insurance, statistics, etc.), but also reviews of books and periodicals, as well as of laws, decrees, and regulations.
